Edition 6.0

Propalms TSE Client 6.0.5.x

Release Notes

Fixes

This release resolves two issues with Propalms Connection Manager and Windows 7 clients.

1. TSE applications would not minimize in seamless mode on Windows 7 machines that had desktop composition & aero interface enabled. This release has the corrected this problem.
2. PCM transform client did not work on Windows 7 and Windows Server 2008. This issue is resolved.

Client Versions

There are two versions of Propalms Connection manager (PCM) released.

1. PCM v 6.0.5.0
2. PCM v 6.0.5.1

1. PCM v6.0.5.0

- PCM v 6.0.5.0 is for all users who do not launch TSE applications over TSE SPR or DMZ SPR server.
- This PCM version does not replace/modify the default RDP client files (mstsc.exe, mstscax.dll) available on client machines under \System32 directory. It uses the available RDP client on the machine.
- If your client OS is XP, Win98 or earlier, this PCM will also work for SPR, DMZ-SPR based app launches.

Note: For Vista and Win7 clients, to launch apps over TSE SPR or DMZ SPR, TSE needs RDP client v6.0 or below. If you are not sure, you may install PCM v6.0.4.1 that supports SPR and DMZ-SPR based app launch.

2. PCM v6.0.5.1

- This PCM replaces RDP client files in system32 for Vista SP* and Win7.
- On uninstall of PCM, it rolls back the RDP client files in system32 to its original version prior to PCM installation.
- The replaced RDP files are saved in '\\Program Files\Propalms Client\BackUp' folder.
- Supports SPR and DMZ SPR on all Windows clients.

Upgrade:

Supports upgrade for all previously released PCM clients from v5.

Supported OS:

Win 2000 Pro, Win XP SP*, Vista SP*, Win 7, Win 2003, Windows 2008, Windows 2008 R2

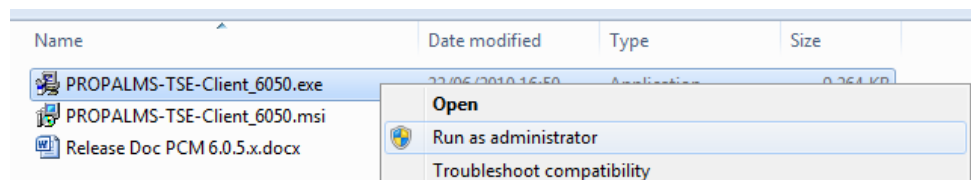

Install instructions:

1. Ensure PCM is not running and all TSE User sessions are closed on the client.
2. For Vista and Windows 7, the client should be installed using **elevated administrator privileges**.

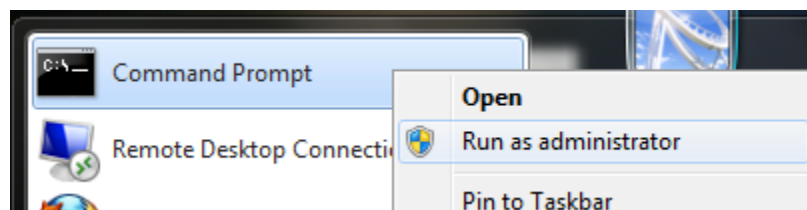

Use one of the methods shown below:

Note: User Account Control (UAC) does NOT need to be turned off.

- I. Right Click on the Propalms Client installation exe and choose 'Run As Administrator'.

- II. Start a command prompt with Run as Administrator option and execute the Propalms Client install msi from this command prompt.

Note: The Propalms Client msi has been saved in c:\pcm directory
