

Access Made Easy

Propalms TSE Case Study

Senate Electrical

Leading distributor
worldwide of
electrical supplies

Senate Electrical is part of the Rexel group, the number one worldwide network in the distribution of electrical parts and supplies. Through a network of 100 branches through the UK, they distribute electrical products from leading manufacturers in all electrical areas including lighting, lamps, cables, wiring accessories, safety & security and ventilation.

THE CHALLENGES

Senate Electrical sought an application delivery solution in order to deploy a new ERP system across the organization from within a hosted datacenter environment. The requirements were for this solution to be simple to manage and deploy, and accessible securely from multiple sites with consistent end-user performance. The product chosen needed to be encompass all of these requirements as well as delivering the application with full functionality and flexibility.

THE DECISION

Senate Electrical chose Propalms TSE on top of Microsoft Windows Terminal Services as their delivery solution as this allowed them to centralize the application installation and configuration but deliver the application to the end-user devices in a seamless mode meaning it appeared no different than if the application had been installed locally. Propalms TSE enabled Senate IT staff to provide access to the various applications based on Active Directory security and centrally manage user sessions along with providing policy based control over what the users could do within the sessions.

THE RESULTS

Centralizing the application delivery model has allowed Senate Electrical to deploy and update their ERP application environment with limited IT staff involvement in comparison to a traditional Client-Server model. They can now securely deliver the applications that their users are authorized to use via a simple web based console in TSE meaning increased application availability and reduced support.

Key Facts:

- 12 Propalms TSE Servers
- Datacenter Hosted
- 1000 Users

Access Made Easy

Propalms TSE Case Study

Senate Electrical

BENEFITS:

- Increased Performance
- Reduced Admin Costs
- Increased Availability
- Reduced Rollout Time
- Security

THE BENEFITS

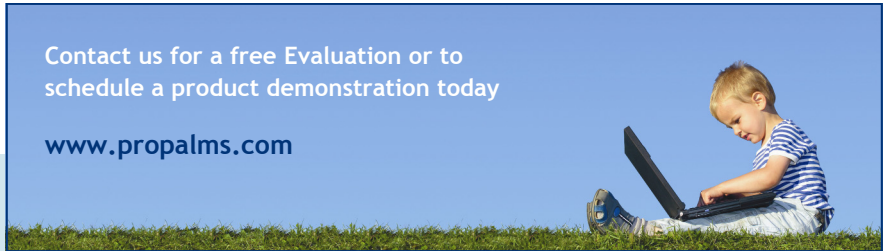

Utilizing Propalms TSE and its easy to use Web Based Management, for Senate Electrical IT staff, deploying applications is now simple. Rather than physically having to install software on multiple client devices across many sites the administrator can simply install and publish the application to the user in minutes with TSE. Updates are not an issue anymore as these can simply be applied to the TSE Servers and are instantly available to all users.

Due to the 'thin' nature of the TSE application delivery platform clients can run their applications over the WAN connections and still experience 'LAN' like performance. In some cases where the application data is stored centrally a significant performance increase can be seen over the traditional client-server deployment method.

All in all, the centralized model provided by Propalms TSE allows for robust application delivery and offers increased security of data and vastly reduced Administration costs for managing application access across many sites.
